

ACO SPORT

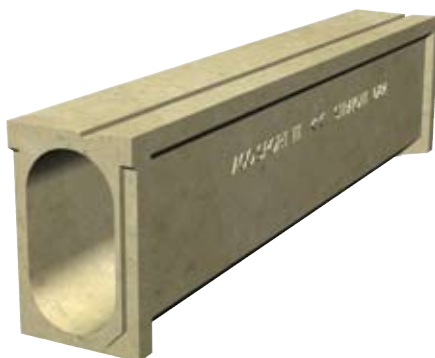

Forest Hills High School New York, NY

PROJECT PORTFOLIO

Product:

System 2000 slotted system

As a part of New York City's "Take The Field" project, Forest Hills High School was undergoing a dramatic renovation to the athletic field and track area. As part of that renovation, ACO Sport's System 2000 was installed to provide discreet drainage without interrupting the visual appearance of the new track and field.

The system's 1/2" slot creates a smooth, safe transition from the

running track to the field area, and allows the running surface to either butt up to, or run across the drain

System 2000 is manufactured with both straight and radiused channels, meaning less installation time and no on-site fabrications.

Forest Hills High School is one of 44 high schools to be renovated through the "Take the Field" Organization thus far.
