

ACO SPORT

Huron High School Ann Arbor, MI

PROJECT PORTFOLIO

Product:

System 2000 slotted system

Huron High School in Ann Arbor, Michigan needed trench drain around the running track. However, the trench drain was to be installed around the track radius only. In addition, a smooth transition was required from the track to the 'D' area to prevent any injuries to the athletes.

ACO Sport's System 2000 slotted track drainage system was specified to specifically meet the project limitations.

The smooth, flat surface of the slotted system allows track material to be bonded to the trench to anchor the track surface in place, creating a safe transition from the track to the 'D' area. The is system also manufactured with both straight and radiused channels, meaning less installation time and no on-site fabrications.

Over 260 feet of ACO Sport System 2000 was installed.
