## Liberty University - Osborne Stadium Lynchburg, VA

### PROJECT PORTFOLIO

**Product:**

***System 2000 slotted system***

Sporting facilities use a wide variety of hard & soft surface materials and Osborne Stadium is no different. All external venues should incorporate surface drainage to protect these surfaces.

Osborne Stadium used System 2000 which is the premier slotted running track drain system, used at most high profile venues, including IAAF and other professional stadiums.

The system is supplied in straight and radiused channels with a matching in-line catch basin to provide continuous drainage around the entire running track. Increased depth provides maximum hydraulic performance.
