PROJECT PORTFOLIO

Product:

System 2000

During the repair and improvements of the Paul Derr Track at North Carolina State University ACO Sport System 2000 slotted trench drains were used around the entire 400 meter track.

The smooth, flat surface of the slotted system allows track material to be bonded to the trench to anchor the track surface in place.

System 2000 is available in straight and radiused sections to fit exactly around a 400 meter track. Due to the extremely close tolerances of the box-like structure of System 2000 it makes it ideal for the strict tolerances on IAAF tracks.
