

ACO SPORT

UC Varsity Village Track and Soccer University of Cincinnati, OH

PROJECT PORTFOLIO

Product:

System 2000

During the refurbishment of the University's soccer field & athletic track facility a trench drain was needed to maximize the track's life and prevent rain delays.

System 2000 was selected as the 'D' areas are used for other athletic events. The 13mm slot is ADA compliant and creates no physical or visual distraction or barrier allowing full utilization of space.

System 2000 is available in straight and radius channels to allow a continuous line of drainage around the track. The catch basins have polymer concrete covers with matching offset slot to match the channels - covers are also covered with track material to provide uninterrupted aesthetics.
