## Colfax High School Colfax, CA

### PROJECT PORTFOLIO

**Product:**

**System 3000**

During the refurbishment of the track & field facility at Colfax High School, an effective and affordable, drainage system was needed to prevent standing water on the track, standing water can quickly deteriorate synthetic surfaces.

System 3000 is a slotted polymer concrete drainage system that is available in straight and radiused

sections to fit aesthetically around the entire track.

Eight catch basins used at intervals around the track provide discharge connections. The catch basins are supplied with a removable slotted cover allowing access to the system for maintenance.
