Contractor:

System 3000
Graef, Milwaukee, WI
Triad Construction, West Allis, WI

When considering a trench drain for the project, freeze thaw cycles were a concern for the design team. The architect wanted a product that was 100% polymer concrete and would withstand the sometimes harsh Wisconsin winters.

ACO Sport System 3000 was chosen because it is made of

polymer concrete and can withstand extreme climates.

The installed trench drain provides a flat surface to easily attach the sport surface to and the ADA compliant slot provides a safe threshold for the players to cross when walking back and forth between the field and track areas.
