

### PROJECT PORTFOLIO

**Product:**

**System 3000**

St. Martin's University in Lacey, WA raised the money to build a new track and field facility with their Winning Spirit Campaign. This facility includes an all weather running track and an integrated infield. In order to protect the investment of this new track and field facility the Landscape Architect decided that a trench drain system was needed.

ACO Sport System 3000 was chosen because it is cost effective and available in straight and radiused sections that fit around the entire track and are aesthetically pleasing.

Additionally, catch basins are installed at intervals around the track for easy access to aid in the maintenance of the track.
