Product:

System 4000 with black plastic ADA grates

The design of the new Alpharetta High School Athletic facility included a perimeter trench drain around the running track.

System 4000 was selected as clipping from the natural turf field could be easily removed if required as grates are removable. Galvanized steel grates were originally specified but due to the fertilizer and weed killer chemicals used to maintain a

natural turf field the specification was changed to plastic grates, which offer the same load capacity but are resistant to the chemicals used.

The grates are also ADA compliant to ensure the safety of athletes crossing the grates to access the field.
