System 4000 with black plastic ADA grates
Odle Mcguire & Associates, West Lafayette, IN
3D Company Inc., Muncie, IN

To prevent water related damage and flooding to the track at Daleville Junior/Senior High School, a drainage system was to be installed.

ACO Sport System 4000 was selected for the project because of it's neat, linear finish that followed the tracks surface and did not

distract from the aesthetics of the project.

Additionally, the black plastic ADA compliant grates create a safe transition for the athletes traveling from the running track to the football field.
