Hartland High School Hartland, MI

PROJECT PORTFOLIO

Product:

System 4000 with galvanized slotted grates

System 4000 was used as the perimeter drain for the running track for the refurbishment of the Hartland High School athletic facility. The system offers excellent hydraulics and has removable grates for easy maintenance.

Channels are supplied in straight meter lengths which can be

staggered to fit around the radius, tight radius can be achieved using half meter channels.

The perimeter drain also prevents soil from washing onto the track from the natural turf infield area.
