PROJECT PORTFOLIO

Product:

System 4000 with black ADA plastic grates

1,096 feet of system 4020 with black ADA plastic grates and 204 feet of system 2000 for the radius was installed at the High Point University Track in High Point, NC.

System 4000 was chosen because of the removable grates. These removable grates gave easy access to the maintenance crew when clippings from the natural turf needed to be removed.

System 2000 was installed in the 'D' areas to allow full use of these areas without having to deal with visible gratings.

Additionally, the ADA compliant grates create a safe transition when running from the track to the playing field.
