

## Lincoln High School Stadium Lincoln, AL

### PROJECT PORTFOLIO

#### *Product:*

#### *System 4000 with black plastic ADA grates*

Lincoln High School was renovating the track and field area. In order to increase the longevity of the track and to keep the running surface free of standing water and safe for athletes a trench drain system was needed.

ACO System 4000 was chosen for the job because of its hydraulic performance capacity which will

prevent flooding and protect the track surface. Additionally, it was an economical solution for the school's budget while still maintaining aesthetics of the track and field area.

The ADA compliant grates are safe for athletes and add to the overall look of the track and field area.
