Product:

System 4000 with gray plastic ADA grates

The Oro Valley Aquatic Center re-opened its doors in March 2013. This refurbishment of an existing 40-year old municipal aquatic center offers competition-ready and family-friendly amenities for guests of all ages.

The deck around the 50-meter (160 ft) pool was raised by two feet to provide the additional pool depth required to hold sanctioned national

swim meets. As part of this deck upgrade a trench drain was required around almost the entire pool.

System 4000 with type 495 gray plastic grates was chosen. The polymer concrete edge and plastic grate are resistant to most chemicals, do not heat up excessively in the Arizona heat and are barefoot friendly with no sharp edges.
