

ACO SPORT

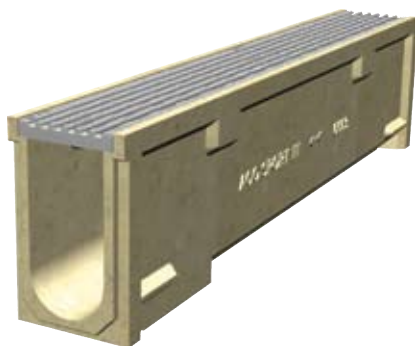

St. Francis DeSales School Columbus, OH

PROJECT PORTFOLIO

Product:

System 4000 with gray plastic ADA grates

During the refurbishment of the schools athletic facilities the drainage for the track was to be replaced. This would ensure that the track and field areas each had their own drainage which would prevent rainwater from the track flooding the edge of the football field and also prevent water, and possibly infill material from the artificial turf running onto the track.

Specifiers were so impressed with the ACO Sport installation a local Kenyon College that they wanted the same product for this project.

System 4000 has removable grates to allow easy access to channels to clean out in-fill particles from the turf. The gray plastic grates are ADA compliant and offer excellent long term aesthetics.
