***System 4000 with Black Plastic ADA Grates & System 2000
Paige Design Group, Bahama, NC
Hellas Construction, Inc., Peachtree City, GA***

When the design team was creating the new track and field facility at the University of Georgia they had one thing decided, to use ACO Sport drainage systems. The University had first used the ACO Sport drainage system 25 years ago and are only replacing the system because they are putting in a new track and field facility in the same location.

ACO Sport System 4000 was used in a portion of the track while System 2000 was used in the remainder.

The ADA compliant grates do not take away from the aesthetics of the new facility and provide safety for the athletes.
