

ACO. creating
the future of drainage

PORTFOLIO

USA Call Center Headquarters Greenville, SC

This center is home to a variety of corporate call centers for US based customer service and sales.

Project Design Brief

ACO StormBrixx® HD was installed under 3 new parking lots at the call center headquarters. Existing stormwater infrastructure created invert parameters that eliminated chamber/stone from being used. The parking lots had grades that require as little as 2' of infill to 11' of infill. StormBrixx® HD was the only HS25 rated system that could accommodate the inverts and infill depth structurally. 100 year storm design requirement because of a stream that parallels the site.

Benefits

- ACO Stormbrixx® HD made the project extremely easy because of how efficient it is to install when compared to chamber/stone.
