the future of drainage

PORTFOLIO

Vincent Ridge Drive Spanish Fork, UT

Vincent Ridge, a subdivision located in Spanish Fork, UT required an expansion. Spanish Fork is about an hour south of Salt Lake City, Utah's capital city.

Project Design Brief

The ACO StormBrixx® SD infiltration system was specified due to its 97% storage efficiency, providing over 8,500ft³ of storage in two separate tanks. The system utilized two layers of modules and two different tanks with remote access plates to allow for easy cleaning and maintenance.

Benefits

- The ACO StormBrixx® SD system fit into a tight, residential area that still needed to support HS20 loading conditions.
- By being wrapped in a geotextile fabric that allowed the stormwater to naturally percolate out into the surrounding soil, the ground water is then recharged and meets BMP requirements.
