

ACO. creating
the future of drainage

PORTFOLIO

Washington STEAM Multilingual Academy Pasadena, CA

Washington STEAM Multilingual Academy in Pasadena, CA was undergoing renovations and decided to add a new sports field section. In order to maintain the fields' beautiful appearance and usability, proper drainage was needed.

Project Design Brief

ACO StormBrixx® SD was specified because of its ability to collect the runoff stormwater, and allowing it to percolate and recharge the soil around it through infiltration. The StormBrixx® SD was installed as a 17,000ft³ system. Another system was specified but StormBrixx provided more benefits.

Benefits

- Due to StormBrixx® SD being lightweight the system was installed easily, therefore reducing cost of the installation.
- StormBrixx® SD will continue to keep the field healthy and the soil rejuvenated for future use. This reduces any wasted water and prevents the field from flooding.
