we care for water

PORTFOLIO

Golden Gate Tennis Center San Francisco, CA

The Golden Gate Park Tennis Center has recently been renovated, making it one of the top public tennis facilities in the country, 17 restored tennis courts, with a new club, a dedicated pickleball court, and longer hours of operation to optimize public access. The renovation aims to repair damaged court surfaces, eroding bases, inadequate drainage, and non-ADA-compliant grates.

Project Design Brief

ACO performed thorough hydraulic analysis and revised the previous layouts to meet the project's requirements. Over 935 feet of walkway was created to guarantee that pedestrian traffic remained safe in all weather conditions while still allowing access to the courts. The Type 451D perforated stainless steel grates complemented the facility beautifully and addressed the ADA-compliance needed.

Benefits

- Type 451D by ACO is designed with the DrainLok system, a patented reinforcement underneath the grate, to prevent bowing and collapse.
